

## Animal Health Plan

Operation Name: \_\_\_\_\_

Site Name(s): \_\_\_\_\_

A qualified flock veterinarian must sign below that the following statements for the specified producer and sites are true:

- The Animal Health Plan has been developed in consultation with the flock veterinarian who is licensed in the state of operation and reviewed annually.
- Broilers are not toe trimmed/treated, beak trimmed/treated, or dubbed, unless therapeutic beak trimming/treatment is required by the flock veterinarian to reduce problems with feather pecking.
- Therapeutic use of antimicrobials is in conformance with the latest edition of the FDA Judicious Use of Antimicrobials For Poultry Veterinarians, and complies with flock veterinarian and withdrawal periods.
- Therapeutic use of antiparasitic agents and antifungals complies with flock veterinarian and withdrawal periods.

NOTE: Treatment must never be withheld to maintain an antibiotic-free production policy. Animals must be given appropriate treatment, including antibiotics, if prescribed by the flock veterinarian, regardless of antibiotic-free production policy.
